ÖNSÖZ

Orta Doğu Teknik Üniversitesi'nde Uygulamalı Matematik Enstitüsü kurulması; Milli Eğitim Bakanlığı'nın 8/5/2002 tarihli ve 12293, 12296 sayılı yazıları, 28/3/1983 tarihli ve 2809 sayılı kanunun değişik ek 30. maddesine göre, Bakanlar Kurulu'nca 16/5/2002 tarihinde kararlaştırılmıştır ve bu karar 21 Haziran 2002 tarihinde resmi gazetede yayınlanmıştır. Enstitü eğitim faaliyetlerini Kriptografi, Bilimsel Hesaplama, Finansal Matematik, Finansal Matematik Hayat Sigortası Opsiyonu ve bu yıl açılan Aktüerya Bilimleri programı ile aşağıdaki misyonlar çerçevesinde sürdürmektedir:

- I. Orta Doğu Teknik Üniversitesi'nin araştırma potansiyeli ve ülkemizin ihtiyaçları göz önüne alınarak, disiplinler arası matematik bazlı araştırma/uygulama alanları belirlemek ve bu çerçevede lisansüstü eğitim programlarını geliştirmek. Üniversitemizde yapılmakta olan matematik ağırlıklı araştırmaları koordine ederek Enstitü bünyesinde disiplinler-arası bir çalışma ortamı oluşturmak, bu alanlarda araştırmaya yönelik konferanslar/yaz okulları düzenlemek ve uluslararası işbirliği olanaklarını araştırmak/hayata geçirmek.
- II. Matematiğin; doğayı, teknolojik ve ekonomik süreçleri daha iyi anlama yolunda bilim adamlarının ortak dili olduğundan hareketle, lisans/lisansüstü eğitimde ve araştırmalarda matematik kullanımının hem nicelik hem de nitelik açısından artırılması yolunda çalışmalarda bulunmak, bu çerçevede yeni, uygulanabilir matematik konularında araştırmacıları bilgilendirmek ve bu amaca yönelik araştırmalar yapmak.
- III. Uygulamalı matematik alanında ODTÜ-Sanayi/Kamu kuruluşları işbirliğini, gerek proje ve ürün geliştirerek gerekse kısa süreli eğitim/araştırma toplantıları düzenleyerek hayata geçirmek.

Bu rapor Uygulamalı Matematik Enstitüsü'nün misyonu çerçevesinde 01.01.2009-31.12.2009 tarihleri arasındaki faaliyetleri içermektedir.

ARAŐTIRMA GRUPLARI

AÇIK ANAHTAR ALTYAPISI (AAA) ARAŐTIRMA GRUBU

Açık Anahtar Altyapısı (AAA) konusunda bilgi birikimi elde etmek ve yeni gelişmeler sunmak amacıyla üç temel grup olarak araştırma yapılmaktadır. Yazılım geliştirme grubu; algoritma geliştirme, analiz ve kodlama çalışmaları yapmaktadır, hukuki işler ve uygulama grubu; kullanılacak olan teknolojilerin hukuka ve kanunlara uygunluđunu arařtırmak ve konu ile ilgili çıkan yönetmelik ve tebliđleri takip etmek ve bunların projedeki uygulamaları ile ilgilenmektedir, altyapı ve sistem geliştirme grubu; proje içerisinde ihtiyaç duyulan altyapı ve sistem gereksinimlerini belirleyerek bu sistemlerin kurulumu ve güvenliđi ile ilgilenmektedir. (www.pki.iam.metu.edu.tr)

AKAN ŐİFRE SİSTEMLERİ ÇALIŐMA GRUBU

Akan Őifre Sistemleri Çalışma Grubunun araştırma alanları akan Őifre sistemlerinin test, tasarım ve analiz konularını içermektedir. Grup bu amaçla literatürde bilinen birçok akan Őifre sisteminin yanısıra, ECRYPT Stream Cipher Project’e sunulan birçok algoritmanın tasarımlarını incelemekte ve analizlerini yapmaktadır. Aynı zamanda akan Őifrelerin genel test yöntemleri ve tasarım kriterlerinin geliştirilmesi konularında da çalışmalar yapılmaktadır.

BOOLE FONKSİYONLARI ÇALIŐMA GRUBU

Bu grubun amacı, dengelilik, tam çıđ ölçütü (strict avalanche criterion), yüksek nonlineerite, yüksek cebirsel derece, yüksek mertebede korelasyon bađışıklığı ve yüksek mertebede propagation kriteri gibi konuları çalışmaktadır. Bu fonksiyonların tasarımında bütün bu karakteristikler hesaba katılmalıdır. Örneđin bükük fonksiyonlar (Bending functions) maksimum nonlineeriteye sahiptir ve sıfırdan farklı her vektör için propagation kriteri sağlar. Fakat bu fonksiyon sınıfı dengeli ve korelasyon bađışıklı deđildir. Boole fonksiyonları kriptografinin önemli bir alanı olmuştur. Shannon 1949 yılında modern kriptografinin temellerini attığında çarpım Őifrelerini ifade etmek için permütasyon ve yer deđiştirme olmak üzere iki temel dönüşüm kullanmıştır. Kullandığı her iki dönüşümde de Boole fonksiyonların kriptografik özellikleri sözkonusudur. Bundan sonraki süreçte kriptolojide Boole fonksiyonları S-kutuları tasarımında yaygın bir şekilde kullanılmıştır. Boole fonksiyonunun iyi olmasının ölçüsü kriptografik özellikleriyle doğru orantılıdır. (<http://www.math.metu.edu.tr/bfwg>)

DİNAMİK SİSTEMLER ARAŞTIRMA GRUBU

“Uygulamalı Dinamik Sistemler” araştırma grubu güncel matematiğin en faal alanlarından biri olan Dinamik Sistemler Teorisinin biyoloji, tıp, ekonomi ve finans gibi alanların problemlerine uygulamaları üzerine yoğunlaşmıştır. UME, Elektrik-Elektronik, Biyoloji, Matematik Bölümlerinden bazı öğretim üyelerinden oluşan bu grup modellerinde, fonksiyonel ve impulsive differensiyel denklemler kullanmakta ve somut problemlerin incelenmesinde çatallanma teorisi, merkez manifold teorisi gibi soyut teorilerden yararlanmaktadır. (<http://www.iam.metu.edu.tr/research>)

EUROPT OPTİMİZASYON ARAŞTIRMA GRUBU

Bu araştırma grubunun amacı, uluslararası işlevsel araştırma ve uygulamalı matematik çalışmalarını özellikle avrupa birliğindeki araştırmacılarla birlikte uluslararası düzeyde canlı tutmaktır. EUROPT Optimizasyon Araştırma Gurubu olarak popüler dergilerin özel sayılarına yayımlar hazırlanmış, birçok çalıştay düzenlenmiş, her düzeyde çeşitli bilimsel aktiviteler gerçekleştirilmiştir. Bunların dışında iki yeni EURO çalışma grubu ile çalışmalar devam etmekte ve 2003 yılından itibaren Uygulamalı Matematik Enstitüsü, EUROPT ve EURO Sürekli Optimizasyon çalışma grubuna ev sahipliği yapmaktadır. (<http://www.iam.metu.edu.tr/EUROPT/>)

FİNANSAL RİSK ARAŞTIRMA GRUBU

Finansal Risk Araştırma Grubu Türk finans sektöründe uygulama ve teoride karşılaşılan problemleri çözmek üzere 2003 yılında enstitümüz bünyesinde kurulmuş bir araştırma grubudur. Bu araştırma gurubu üniversite ile finans kurumlarının risk birimi çalışanlarını bir araya getirerek söz konusu problemlerin anlaşılmasını ve çözüm önerileri üretilmesini sağlamak amacıyla gütmektedir. (<http://www.iam.metu.edu.tr/research/groups/riskman.html>)

HESAPLAMALI BİYOLOJİ VE TIP ARAŞTIRMA GRUBU

Bu araştırma grubunda yer alan temel konular, gen ekspresyon motiflerinin modellenmesi ve tahmini, hesaplamalı insan metabolizması, beyin araştırmaları, kalp araştırmaları, populasyon dinamiği, gen dinamiği, gen değişimleri (populasyonların sınıflandırılması), sürdürülebilir gelişme, ve dünya ısısının kontrolüdür. Bu grup ODTÜ’de Biyoinformatik/Hesaplamalı Biyoloji üzerine **Bilim ve Teknolojileri YUUP Grubu** ile ortak çalışmaktadır. **YUUP araştırma grupları**’nda, biyoteknoloji, tıp ve biyoinformatik gibi araştırma konuları ile ilgili birçok temsilcisi bulunmaktadır. (<http://www.iam.metu.edu.tr/research/groups/compbio/index.html>)

HİBRİD SİSTEMLER ARAŞTIRMA GRUBU

“Development of Modeling and Optimization Tools for Hybrid Systems” NSF-TÜBİTAK INT ve “Modeling Multistationary Processes by Using Hybrid System Formulation: A study with priority on functional genomics” TÜBİTAK kariyer projesi çerçevesinde çalışmalar sürdürülmektedir. (<http://www.iam.metu.edu.tr/research/groups/hybrg/index.html>)

KODLAMA TEORİSİ ARAŞTIRMA GRUBU

Ana uygulamasının iletilerde oluşan hataların saptanması/düzeltilmesi olan hata düzeltici kodlar, özellikle otantikasyon kodlarıyla kriptografiye ve bilginin lineer olarak işlendiği başka alanlara da uygulanabilmektedirler. İyi parametrelere sahip kodların çok noktalı cebirsel eğrilerden ve varyetelerden elde edildiği bilinmektedir. Bu araştırma grubunun ilgi alanları: iyi parametrelere sahip hata düzeltici kod inşası, sonlu cisimler üzerindeki cebirsel eğriler ve varyeteler, çok noktalı eğriler inşası ve bu eğrilerden kodlar üretilmesi ve kodlama teorisinin kriptografiye uygulamaları sayılabilir. Ayrıca hata düzeltme kodları kullanılarak doğrulama kodlarının oluşturulması da amaçlanmaktadır.

OPTİMİZASYON TEORİSİ ARAŞTIRMA GRUBU

Bu araştırma grubu global, yarı-sonsuz değişkenli, türevsiz ve düzgün olmayan optimizasyon konularında çalışmalar yapmaktadır. (<http://www.iam.metu.edu.tr/EUROPT>)

TERS PROBLEMLER ARAŞTIRMA GRUBU

Grubun 2007 yılı çalışmaları, diğer grupların çalışmalarına ve projelerine destek şeklinde, ortaklaşa yürütülmüştür. (<http://www.iam.metu.edu.tr/research>)

Course Title:	Special Topics: Algebraic Aspects of Nonlinear Functions
Course Code:	IAM 722
Credit:	(3-0)3
Instructor's Name:	Prof. Dr. Ferruh Özbudak
Prerequisites:	Consent of the instructor
Content:	This course introduces various aspects of nonlinearity in cryptography together with its connections to geometry, number theory, design theory, coding theory and related areas.
Aims:	<p>The aim of this course is to introduce algebraic aspects of power polynomials used to construct (almost) perfect nonlinear (APN) and almost bent (AB) functions. After giving some basic facts about Boolean functions such as nonlinearity, differential uniformity, we shall discuss all known characterizations of APN and AB function.</p> <p>The emphasis will be given on the affine equivalence classes such as extended affine and Carlet-Charpin-Zinoviev (CCZ) equivalence. We will study characteristic properties of APN and AB functions.</p>
Learning Outcomes:	This course will be beneficial for students interested in cryptographically secure nonlinear function construction methods. Moreover, at the end of this course, students should have a good overview of recent approaches in APN and AB functions.

Course Title:	Special Topics: Stochastic Energy Pricing Models
Course Code:	IAM 753
Credit:	3(3-0)
Instructor's Name:	Martin Rainer (mrainer@metu.edu.tr)
Prerequisites:	Stochastic Calculus (e.g. like textbook of Lamberton-Lapeyre); and consent of the instructor;
Content:	<p>Motivation: Energy markets and related pricing models for the major traded assets and financial instruments becomes increasingly important for Turkey, due to several forthcoming projects in the energy markets which make Turkey a main distribution hub between the Middle East and Europe.</p> <p>This course concentrates on mathematical concise models for the pricing of assets and derivatives in the related markets of gas, electricity, and temperature. The framework is that of general Levy processes, related Ornstein-Uhlenbeck processes and semimartingales, including jumps and stochastic volatility.</p>
Aims:	After this course the participant will have a detailed understanding of major mathematical models for energy markets, their application to the gas, electricity, and temperature markets and their derivatives. The assumptions, advantages and drawbacks of alternative models are clarified. In parallel to the theory, hands-on examples will be elaborated by the participants using MATHLAB and Excel.
Learning Outcomes:	At the end of this course, students should know how to price assets and derivatives in the major energy markets. The critical judgment towards alternative modeling approaches will be sharpened. The student will also learn how to structure complex tasks, such as the construction of electricity forward curves. Mathematical knowledge and methodology of general semi-martingales and Levy processes will be deepened and trained. This course is an important step for participants who wish to do their MSc or PhD thesis in energy market models, and/or wish to prepare to work as quantitative analyst for a trading desk in energy markets.
Suggested Textbooks:	<p>Lecture notes will be prepared during the course. Most of the content of this course is covered in: F. Benth, J.S. Benth, S. Koekebakker, Stochastic Modelling of Electricity and Related Markets, 2008</p> <p>L. Clewlow, C. Strickland, Energy Derivatives: Pricing and Risk Management, 2000</p> <p>A. Eydeland, K. Wolyniec, Energy and Power Risk Management, 2003</p> <p>Further special references will be given during the course.</p>
Outline:	<p>Energy markets survey (1 week), Energy spot price models (1 week), Forward and swap pricing (1 week), Gas spot and future modeling (1 week), HJM modeling approach to forwards and swaps (1 week), Construction of electricity forward curves (1 week), Electricity future model (1 week), Principal component analysis (1 week), Model calibration (1 week), Options on forwards and swaps (1 week), Asian and spread options (1 week), Temperature modeling (1 week), Temperature derivatives (1 week)</p>
